Objectives of the activity

This activity aims to give a perspective as we also aim to develop an app for a movie ticketing system. This app will allow users to book their movie tickets online and advanced, pick out their preferred seats and schedule, select what other concessionaires that they want and also receive the confirmation of their booking along with their digital ticket. This ensures an easy way and a user-friendly experience for the cinema owners and the customers which improves the efficiency of the movie owners and the satisfaction of the customers

🟡 About the app: Popseat

PopSeat is an online mobile app that gives the customer an easy way to select their preferred seats, schedule and cinema. This is for movie enthusiasts that always spends their time in the theaters so that they can have a hassle-free experience when going to one.

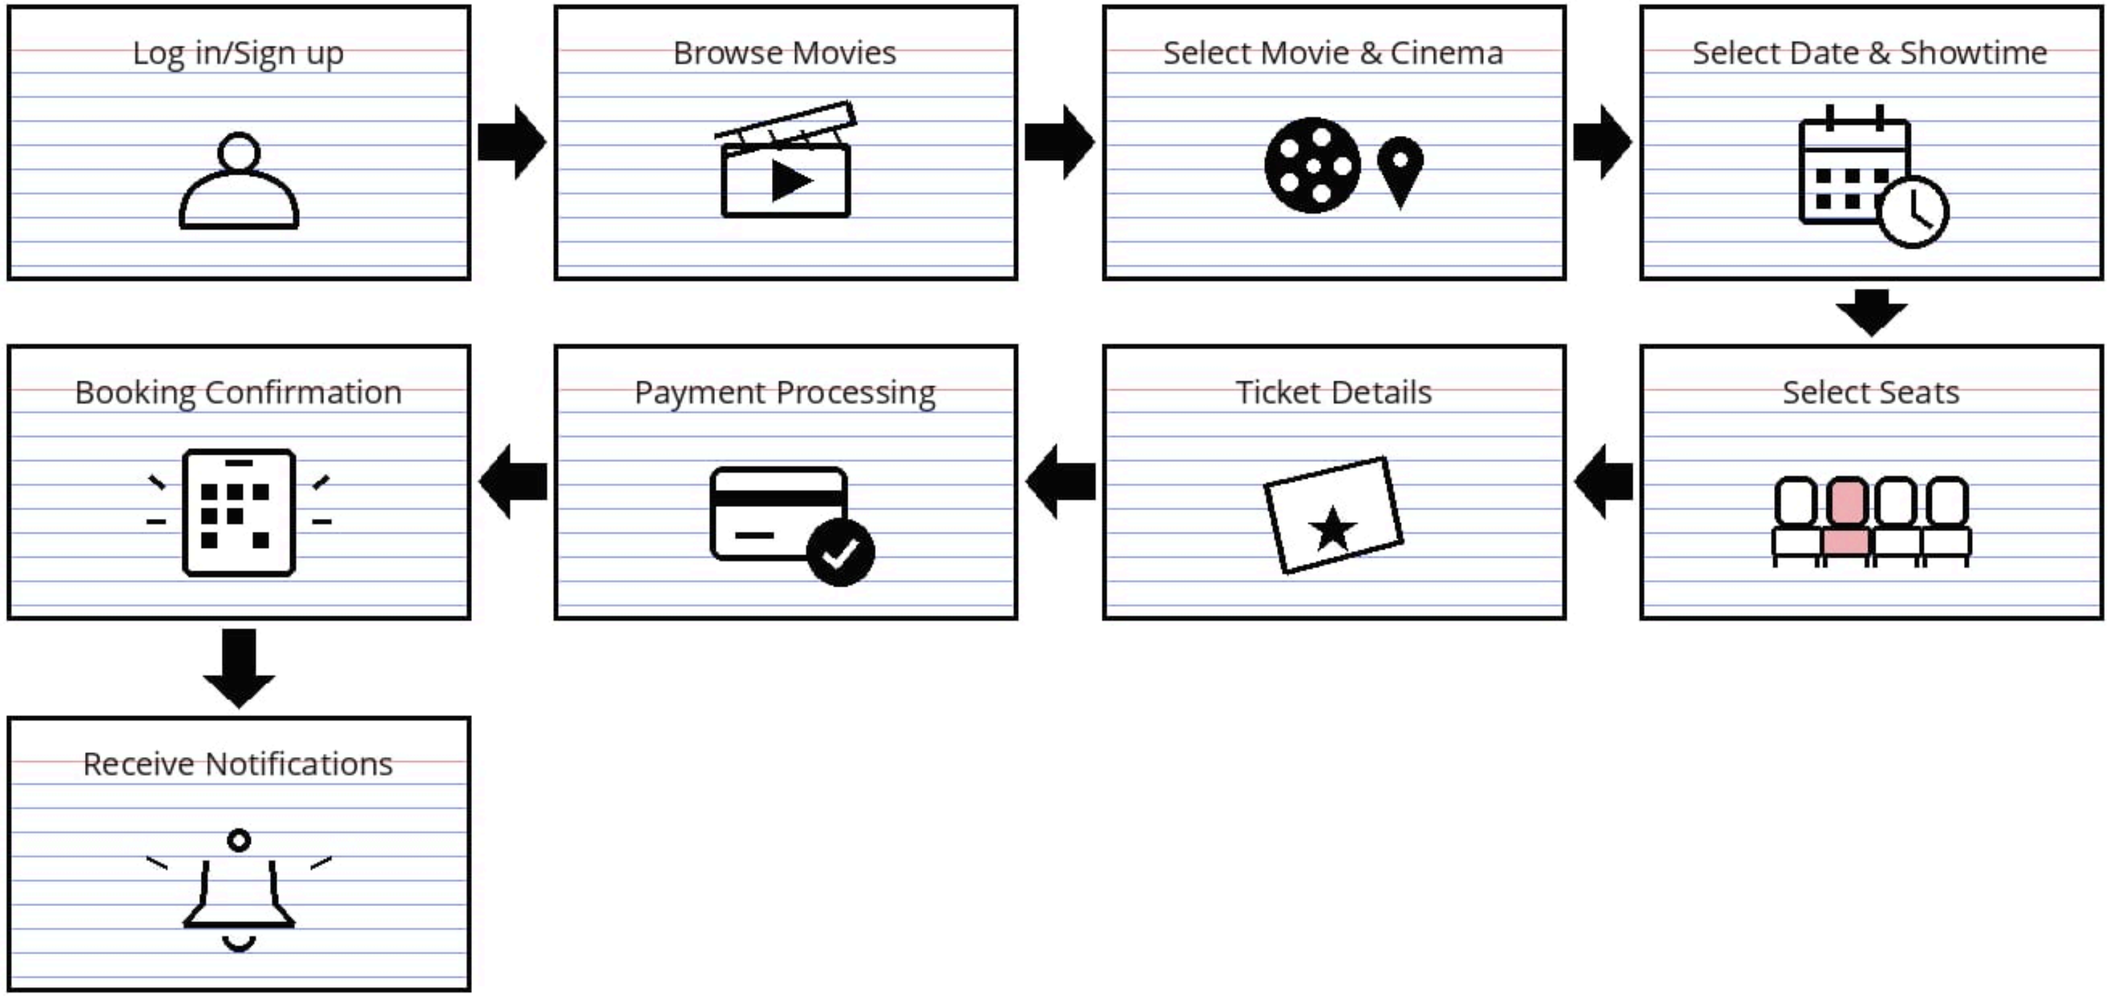

Features

Conceptual Model

Index Card Prototype

Storyboard Prototype

Scene 1:

Passion

1. Awareness
User Actions: Joshua finishes his thesis defense and decides to watch a movie to relax. While browsing social media, he discovers PopSeat.

User Needs: He wants an easy way to find a good movie and an available cinema without wasting time.

Process & Channels:

- Finishes his thesis defense.
- Searches for movies on his phone.
- Discovers PopSeat through social media.
- Checks the app's features.

2. Installation
User Actions: Joshua downloads PopSeat from the app store and creates an account.
User Needs: He wants a quick registration process so he can immediately browse available movies.
Process & Channels:

- Opens the app store.
- Searches for PopSeat.
- Downloads the application.
- Registers and logs in.

Opportunities: Provide a simple registration process, clear navigation, and a beginner-friendly interface.

Experience Map

3. Usage

User Actions: Joshua browses available movies, compares cinema locations and schedules, selects his preferred seat, and adds popcorn and a drink before paying.

User Needs: He wants to book his movie ticket and snacks in one application.

Process & Channels:

- Opens PopSeat.
- Selects a movie.
- Checks which cinemas are showing it.
- Chooses a schedule and seat.
- Adds snacks and drinks.
- Confirms and pays for his order.

4. Effectiveness

User Actions: Joshua receives his digital ticket and uses it to enter the cinema. He enjoys his movie after his stressful thesis defense.

User Needs: He wants a smooth cinema experience without unnecessary waiting or booking problems.

Process & Channels:

- Receives his booking confirmation.
- Views his digital ticket.
- Presents the ticket at the cinema.
- Collects his snacks.
- Watches the movie and relaxes.

5. Regular Usage

User Actions: Joshua realizes how convenient PopSeat is and decides to use it whenever he wants to watch movies with friends or classmates.

User Needs: He wants a reliable and convenient movie-booking application for future cinema visits.

Process & Channels:

- Opens PopSeat to check upcoming movies.
- Looks for new movie schedules.
- Books tickets again.
- Recommends the app to friends.

Passion

1. Awareness

User Actions: After experiencing road rage, Prince wants to calm himself by watching a movie. He searches online for cinema schedules and discovers PopSeat.

User Needs: He wants to find a nearby cinema showing his preferred movie without visiting multiple locations.

Process & Channels:

- Experiences a stressful road incident.
- Decides to relax by watching a movie.
- Searches online for movie schedules.
- Discovers PopSeat.

2. Installation

User Actions: Prince downloads PopSeat and creates an account after learning that he can check movie availability across cinemas.

User Needs: He wants to start using the app quickly without a complicated registration process.

Process & Channels:

- Opens the app store.
- Searches for PopSeat.
- Reviews its features.
- Downloads the app and registers.

Experience Map

3. Usage

User Actions: Prince searches for his preferred movie and checks which cinemas are showing it. He selects a convenient location, schedule, and comfortable seat. He also orders snacks before completing his booking.

User Needs: He wants to find his movie easily, avoid crowded ticket counters, and enjoy a comfortable cinema experience.

Process & Channels:

- Opens PopSeat.
- Searches for his preferred movie.
- Checks participating cinemas and showtimes.
- Chooses a cinema and available seat.
- Adds snacks to his order.
- Pays and receives his digital ticket.

4. Effectiveness

User Actions: Prince arrives at the cinema with his ticket already booked. He enters the theater and enjoys the movie without dealing with long ticket lines.

User Needs: He wants an organized, convenient experience that allows him to relax after a stressful day.

Process & Channels:

- Arrives at his selected cinema.
- Opens his digital ticket.
- Presents the ticket for verification.
- Collects his snacks.
- Watches the movie and feels more relaxed.

5. Regular Usage

User Actions: Prince appreciates how PopSeat helped him avoid additional stress. He decides to use it for future movie trips, especially when he wants to unwind.

User Needs: He wants a dependable application that makes planning movie visits simple and convenient.

Process & Channels:

- Checks PopSeat for upcoming movies.
- Compares cinemas and schedules.
- Books tickets for future visits.
- Shares the app with classmates and friends.

Product Vs. Maker Movement Applications

Product vs. Maker Movement Applications
Unlike maker movement projects, PopSeat, a movie ticketing application, is designed with user experience (UX) in mind, offering easy navigation and convenient movie booking. While maker movement projects are often small-scale prototypes, PopSeat aims to connect users with different cinemas, allowing them to check movie schedules, select preferred seats, purchase snacks, and pay online without waiting in long lines.

SDKs and APIs are essential for enabling features such as:

- Movie browsing and cinema location selection
- Real-time movie schedules and seat availability
- Interactive seat selection and ticket booking
- Online snack ordering and payment processing
- Digital tickets with QR codes and booking notifications
