EXPLANATION

The Razzie Plus Home Theater universal remote control is originally designed into making your home entertainment experience to be seamless and enjoyable while being hassle free. This is constructed so that the necessities into making the perfect home theater can be controlled in a single remote control. In this remote control you get to handle the projector, the theater lighting and as well as the theater temperature with the control over the air conditioner. The Razzie Plus Home Theater also has an information HUD to view the necessary and concrete details about the whole theater environment and as well as the movie that you're currently watching. This is also equipped with a Smart Voice Command system so that if you don't have the feel on clicking too many buttons, you can simply activate the voice command and speak away the modifications you wish to do on your home theater. In this remote you can also control the lighting. From the usual full lights setup for when you arrive at the theater and when you're leaving the theater to the Dimmed Lights setup for when the movie's about to begin or when it is ongoing. All in the essence of an actual movie theater. Another feature of this remote control is the mode where you can control the temperature of the room for when it gets too cold or too hot in the room, you can have the access into changing that with a single click on the remote control. A unique feature of this remote is the way you can avoid spending too much money on single use battery because this remote control is rechargeable under the type c port or wirelessly so that you can never worry about batteries and the fear of not being able to use your remote immediately. Plus, you can also monitor the status of the battery percentage through the Information HUD so you can always keep track of how many battery percentage is left on the battery. Me and my groupmates agreed to this idea because we have a fond on sharing our similarities through the likes of watching movies in theater so we really love the concept of having a full theater setup for ourselves and having to modify that setting using a single remote is truly wonderful because it makes the experience seamless and effortless. We truly believe that this concept is innovative because it's realistic and it can adapt to the present with the advancements we put. Which is why in summary, The Razzie Plus Home Theater universal remote control is the perfect utility for this activity because of the attention to detail we put into making this and as well as the innovation it can bring and among all of that, it displays our group's creativity and wonders into making newer technologies.
