ONLINE CINEMA TICKETING SYSTEM

Group 1: Razzie
Angeles, Maniego, Ruiz

USER PROFILE

RYAN MARBEE E. ANGELES
STUDENT
MANDALUYONG, PHILIPPINES
21(SAVAGE) YEARS OLD
SINGLE

USER STORY

Ry always likes to book online through available apps so that he can walk into a theater with ease. He booked in a known cinema app that provides a lot of benefits to their members and makes the process smoother. He made a purchase of a movie ticket along with some concessions with a discount percentage for being a consistent member of the app. He used his phone to book and the qr code that was needed to be presented in the counter was saved on the app itself. This is the most convenient option because you don't need to have to wait in line for physical copies of your tickets or wait in line along with other cinema goers who will only about to order their food on the counter but rather you only need to present the qr code that was provided when you purchased your ticket online.

GOAL

- Connect to the internet to access his tickets. His only way is to ask other people around him or wait for the public internet connection to connect and hope that it has enough signal for him to access his tickets.
- He needs to access those tickets before the movie showing

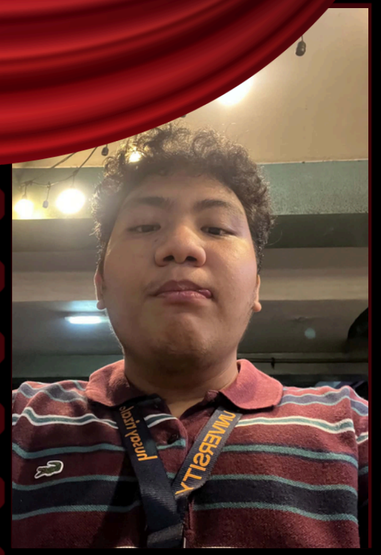
USER SCENARIO

Ry booked a ticket to watch a documentary called Don't Look Back in Anger which features a documentary about the band Oasis. He arrived at the theater not realizing that he doesn't have any data left to access the qr code that was provided to him. He didn't want to disturb other movie goers because some of the people there are accompanied by their partners, loved ones and family members. He needed to have access to the internet so that he can open the qr code for him to go inside the theater

FEELING UNEASY

Needs to have an internet access because he might not be able to get in the theaters if he can't provide his tickets.

Hoping that the public internet connection will go through so he can access his tickets



USER PROFILE

JOHN DAVID G. MANIEGO

Location and personal details withheld

USER STORY

he enjoys watching movies with his friend, especially when they know both the movies they do this in weekends. He prefers to book movie tickets online because it is faster and more convenient and you can get a discount on it is more preferable than waiting in long lines at the cinema. David always uses his phone to search for available movies and check showtimes and select the best spot in seats he always looks for student discount to save money and after completing his payments he gets email or receives an email as a digital ticket with QR code that he can present at the cinema entrance without needing a printed ticket

USER SCENARIO

David plans to watch a newly released movie spider man with his friend on Sunday Midnight He decides to book their tickets online using his Iphone 13 128 GB Fully Paid to avoid long lines at the cinema he selects the best their movies showtime and best seat for them before completing the payments after booking he receives a digital ticket with a QR code but However when they arrive at the cinema he experiences an unstable connection but Fortunately he has already saved a screenshot of his tickets allowing him and his friends to enter the cinema without any problems

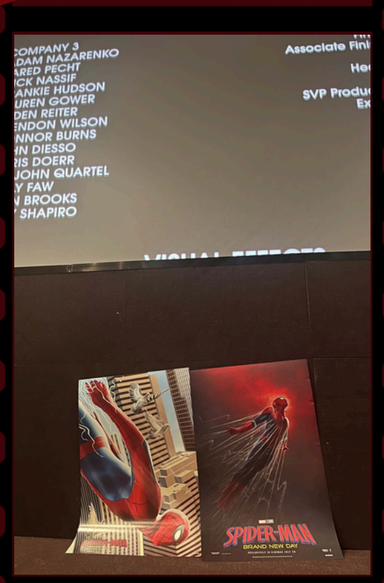
GOAL

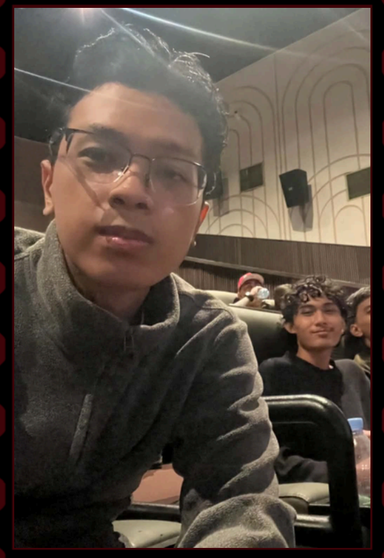
He wants to book a movie ticket easily using phone
He wants to select the best seat and showtime
He needs to receive a digital ticket with a QR code
He needs to screenshot the ticket
He wants to avoid long lines at the cinema
He wants to save money through student discounts.

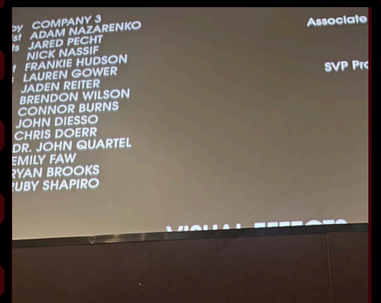
FEELING UNEASY

David worries that his favorite seat might already be occupied especially when watching his favorite newly released movies during weekends

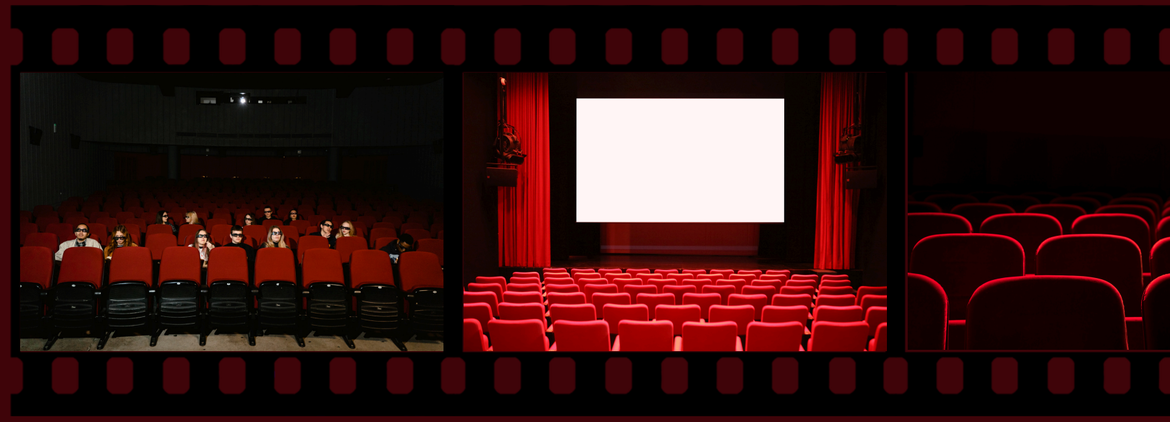
David is concerned that a slow connection or payments error might interrupt his plan and prevent him from receiving his ticket







PROJECT DRIVERS



PURPOSE OF THE PRODUCT

The product aims to give a convenient and reliable platform for them to purchase movie tickets off. This is so that they can make watching movies more easier by doing all the necessary steps to watch a movie, within the grasp of your phone.

THE STAKEHOLDERS

Cinema Owners and The Management - These are the organizations that benefit from improved ticket operations.

Cinema Staffs - These are the employees that are responsible for the validation of the online ticket purchases

Customers - These are the people who use the system for their entertainment

PROJECT CONSTRAINTS

MANDATED CONSTRAINTS

It should be mobile and desktop friendly, Internet dependent, and fit the group's budget for development. The system should also conform to the Philippine data privacy laws, enable secure online transactions, eliminate double booking of tickets and adhere to cinema policies.

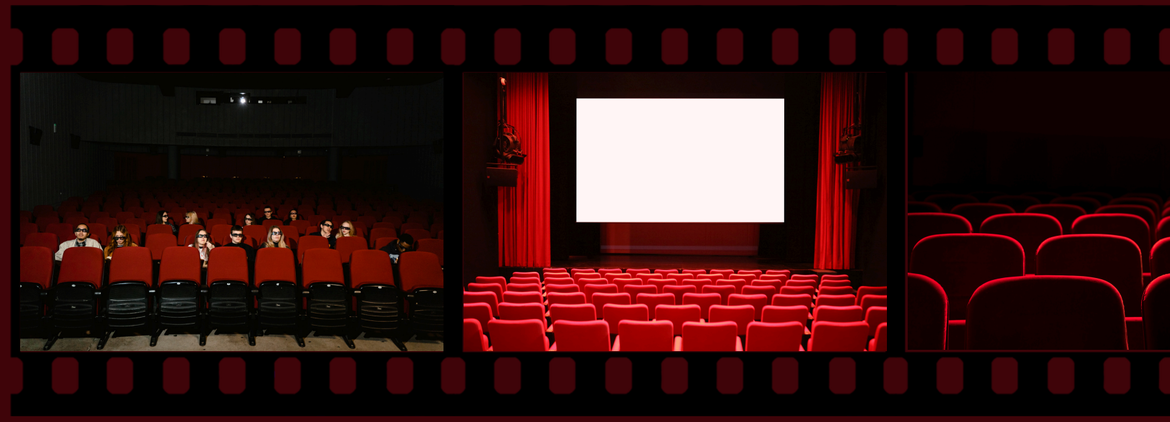
NAMING CONVENTIONS AND TERMINOLOGY

Clear and consistent terms should be used in the system, for example the term Movie, Showtime, Seat, Booking and Digital Ticket should be used throughout the system. These terms will familiarize the users with the booking process and set them on the right path to easily use the application.

RELEVANT FACTS AND ASSUMPTIONS

The system is assuming that customers will have an internet connected device and have the basic knowledge of online transactions. It also assumes that the participating theatres will be able to give correct details of movies, timings, ticket rates and seats availability.

FUNCTIONAL REQUIREMENTS



THE SCOPE OF THE WORK

In this system, the main emphasis is on the design and development of the system which is an online system for booking tickets in the cinema. It consists of eliciting user requirements, designing the user interface, building key capabilities and testing the system. It also guarantees that it will be more effective for customers, and will make it more accessible, too.

THE STAKEHOLDERS

Cinema Owners and The Management - These are the organizations that benefit from improved ticket operations.

Cinema Staffs - These are the employees that are responsible for the validation of the online ticket purchases

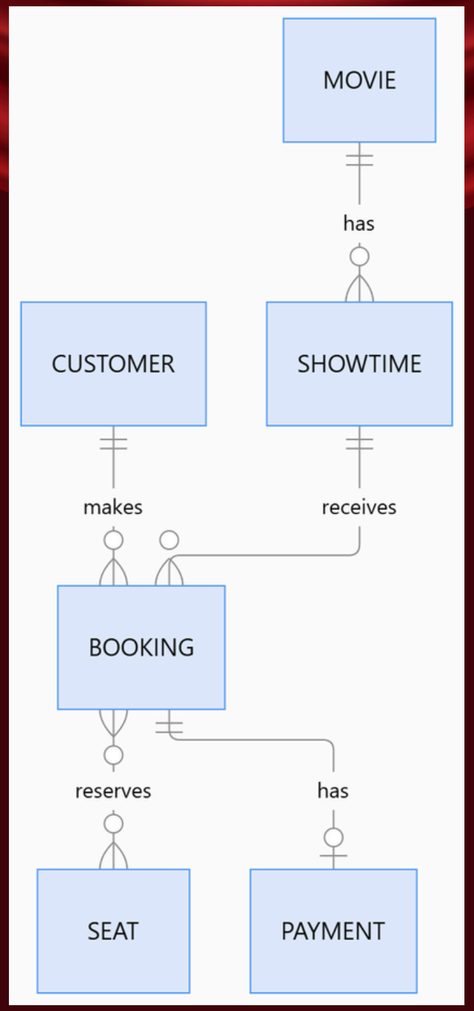
Customers - These are the people who use the system for their entertainment

THE SCOPE OF THE PRODUCT

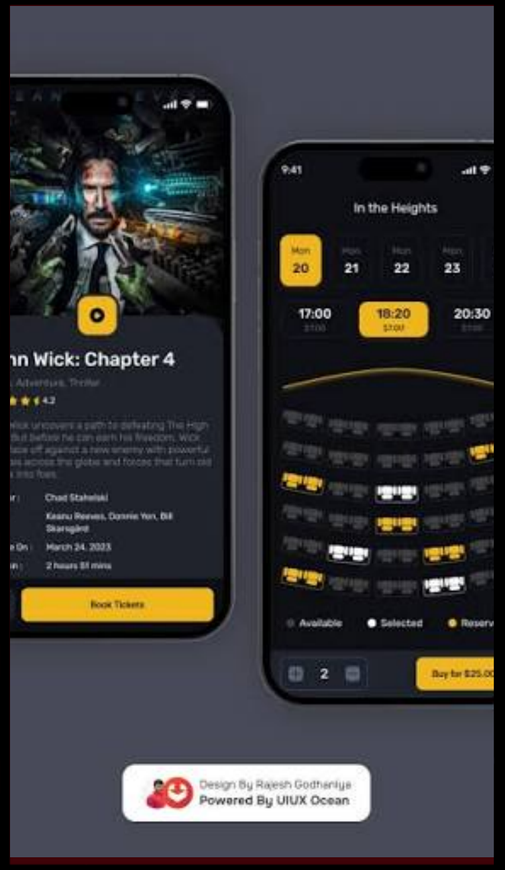
The system will offer features including movies browsing, point in time and cinema selection, seats reservation, online payment and digital QR code tickets. It will also have administrative capabilities to organise movie schedules, ticket costs, and booking.

FUNCTIONAL REQUIREMENTS

The system should enable users to register, view movies listings, book seats, pay for tickets, and download e-tickets. The system should also enable administrators to control the information of the cinemas and not allow double booking.



BUSINESS DATA MODEL AND DATA DICTIONARY



NON-FUNCTIONAL REQUIREMENTS

LOOK AND FEEL REQUIREMENTS

The system should be aesthetically pleasing, updated, and have a cinematic theme that features legible text and easy-to-navigate navigation. The interface should be very clear and show posters of the movies, available seats, and booking information, which will enhance user experience.

USABILITY AND HUMANITY REQUIREMENTS

The system should give a simple and a user-friendly interface so that users can be accommodated with different levels of tech experience. The system should give clear instructions, accessible features and understandable and easy to comprehend error messages so that users can book easily

PERFORMANCE REQUIREMENTS

The system should be able to load movie listings within as fast as 3 seconds and update the availability of the seats within real-time or two seconds at least so that users can accurately book their preferred seats and so that no duplication of purchase will occur.

OPERATIONAL AND ENVIRONMENTAL REQUIREMENTS

The system should operate on the most commonly used web browsers or should be available as an application on mobile phones and be available on the most accessible places to download such as google play or app store for easier discovery for the users and the system should also require an internet connection, database and a secure server for them to process the reservation of seats and for payments too.

NON-FUNCTIONAL REQUIREMENTS

COMPLIANCE REQUIREMENTS

The system will have to comply with the Philippines Data Privacy Act of 2012, which ensures that the private information of the customers is safeguarded. It should also conform to the policies of the movies, as well as secure online payments.

PROJECT ISSUES

PROJECT ISSUES

the problems such as unstable internet connection, failure of online payment, duplicate booking of cinema seats, and wrong movie scheduling can arise in the system. Consumers can have difficulties when requesting for cancellation and refund of tickets.

NEW PROBLEMS

The system may encounter problems when many customers book tickets at the same time, especially during popular movie releases. Other possible problems include delayed payment confirmations, duplicated QR codes, and difficulties updating available seats in real time.

OFF-THE-SHELF SOLUTIONS

This system may utilize current technologies like online payment systems, QR Code generators, cloud database, and email notifications systems. These current technologies may assist in making the booking process better and decrease the time taken to develop this system.

TASKS

This project will entail developing an easy-to-use interface, providing movie search and seat selection services, user registration and login functionalities, payment online, and issuance of QR-coded e-tickets. The system should also be tested to make sure that it is working well.

PROJECT ISSUES

MIGRATION TO THE NEW PRODUCT

The system should allow existing customer information, movie schedules, and booking records to be transferred from the old system to the new online cinema ticketing system. This will help cinema staff manage records efficiently without losing important information.

COSTS

This process may be threatened by risks such as hacking and unauthorized access of customers' information. Other possible threats include server crashes, payment mistakes, lack of Internet access, and system malfunction leading to wrong reservations.

USER DOCUMENTATION AND TRAINING

It is advisable that the system provides clear guidelines for registration, searching for movies, booking seats, payment process, and digital tickets retrieval. There will be basic training provided to the staff in scheduling the movies, reservation checking, and verification of the QR Code tickets.

RISKS

There is also an issue of security, with the system being prone to attacks such as hacking, and customers' data may be accessed illegally. Some of the other issues may be server malfunction, payment problems, internet disconnections, and system malfunction.

PROJECT ISSUES

WAITING ROOM

The system should include a virtual waiting room to manage customers when many people are booking tickets at the same time. This feature will help prevent server overload, reduce system crashes, and provide a smoother booking experience, especially during popular movie releases

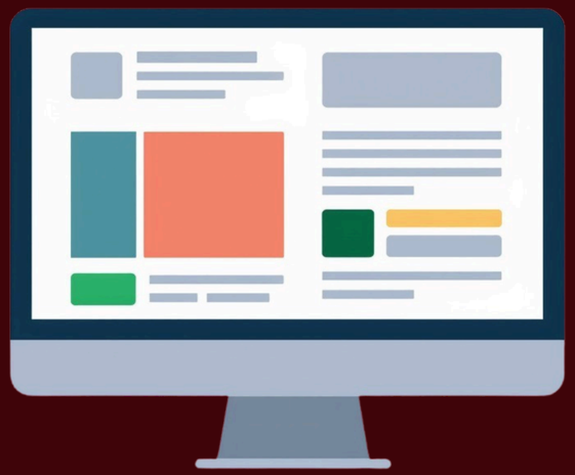
IDEAS FOR SOLUTIONS

In addition, the system should have real-time updates of seats to avoid double booking, and download of tickets in QR codes to be available to customers offline. Other features like regular maintenance of the system, secure payment confirmation, database backup, and customer support should be considered.

PRODUCT DIMENSIONS

1. USERS

The User dimension contains all persons who interact with our system, either directly or indirectly. This involves primary users, such as moviegoers and students (our group personas Ryan and David), who use the platform to see the movies, find seats, book a student ticket, and bring their e-tickets to the movie. It also includes cinema attendants at the entrance scanning the QR code and cinema manager who changes the movie list, adjusts movie seating and handles pricing.



2. INTERFACE

The Interface dimension refers to the way our product interacts with people, with other software programs, and with physical devices. The system has a responsive user interface for mobile apps and web browsers. It works with external payment gateways for digital wallets such as GCash and Maya, is connected to notification systems to email ticket receipts, and can connect to the bar code/QR code scanners used by cinema gatekeepers.

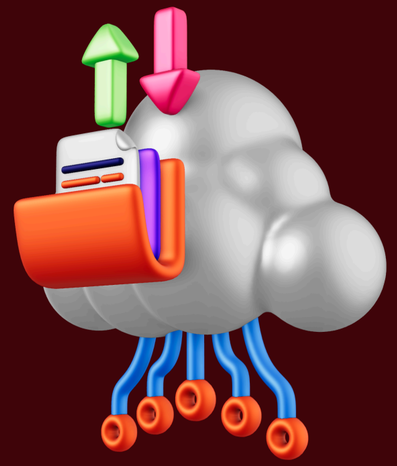
PRODUCT DIMENSIONS

3. ACTION

The Action dimension describes the major functional capabilities and features offered to the user by the product. Search for the movies currently being shown, view showtimes, choose their seats from a real-time interactive seating map, benefit from student discounts at checkout and download an e-ticket with the QR code to their device so they can show it later without the internet connection.

4. DATA

The Data dimension is the full set of information that is stored and manipulated in the application. Customer information, account information and student verification information are stored in the database. It also keeps cinema operational records like movie information, showtime schedules, room layouts, ticket pricing, completed transaction logs, and unique QR code ticket tokens.



PRODUCT DIMENSIONS

5. CONTROL

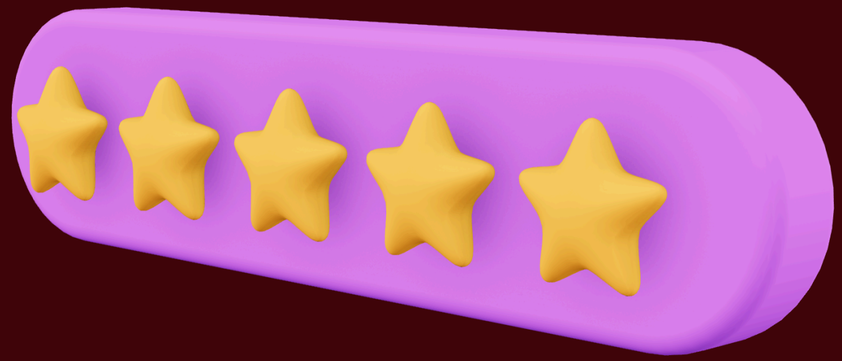
The Control dimension imposes heavy business rules, access rights or operation restrictions. The system implements a temporary seat hold timer when checking out to prevent any double booking. It also forwards the traffic to a virtual waiting room during peak movie drops to prevent server crashes, and implements data encryption and privacy protections according to the Philippine Data Privacy Act of 2012.

7. QUALITY ATTRIBUTE

The Quality Attribute dimension specifies the properties to which the whole system's performance, usability and reliability are measured. Movie listings loads in 3 seconds and seating maps in real time updates in 2 seconds. The interface is user friendly and dark with a cinematic theme and offline ticket caching ensures that users such as Ryan and David can retrieve their saved QR codes even when they are without mobile internet connection at the theater.

6. ENVIRONMENT

The Environment dimension represents the physical environment, operating environments, and technology platforms needed for the system. The software is to be deployed on a cloud-server architecture with local device storage, and is to be accessible on Android, iOS and web browser platforms. The app is optimized for the physical space at the cinema where handheld scanners read mobile screens, particularly when it's dark.



THANK YOU
ENJOY THE SHOW
